

## 02 TUPLE Operations

### Markdown Cell 1

Experiment 2 — TUPLE Operations

Source: tuple PDF

Various operations using Tuple data structure in Python. `Aditya` has been changed to `Aditya`.

### Code Cell 2

```
mytuple=('manish',)  
print(mytuple)
```

### Code Cell 3

```
mytuple=('manish','gupta','amity','university')  
print(type(mytuple))  
print(mytuple)
```

### Code Cell 4

```
mytuple=('manish','gupta','amity','university')  
mytuple1=list(mytuple)  
mytuple1[1]='Aditya'  
print(type(mytuple1))  
mytuple=tuple(mytuple1)  
print(mytuple)  
print(type(mytuple))
```

### Code Cell 5

```
mytuple=('manish','gupta','amity','university')  
print(mytuple[3])  
print(mytuple[-3])  
print(mytuple[1:3])  
print(mytuple[-3:-1])  
print(mytuple[1:])
```

### Code Cell 6

```
mytuple=('manish','gupta','amity','university')  
mytuple1=list(mytuple)  
mytuple1.insert(1,'Aditya')  
mytuple1.append('Aditya')  
mytuple=tuple(mytuple1)  
print(mytuple)
```
